Mitch Drake, Interim CEO

Golden Bear LLC (GBB)

From: Tom West, UCCC and MECCC Consortia Manager

Subject: Response to Comcast Communications' Challenge to the GBB

Application for a CASF Infrastructure Program Grant

Date: April 1, 2013

You requested assistance in responding to Comcast Communications' challenge to the Golden Bear Broadband grant application. The following summarizes our:

- attempts to engage Comcast in the development of the Northern California Regional Middle-Mile Infrastructure (NCRMMI) plan and participation in the formation of Golden Bear Broadband, LLC;
- analysis of Comcast's infrastructure deployment;
- analysis of Comcast's current services to communities of the six (6) counties it serves in relation to the proposed NCRMMI that will serve all 16 counties; and,
- feedback and concerns from constituents about differences between what Comcast and other providers advertise and CPUC publishes and what they actually experience or perceive.

The Comcast Challenge

Comcast provided the CASF with information as to the number of households passed by Comcast in the CBGs it was challenging. Comcast stated that these CBGs (i) are not "under-served" and (ii) should not be eligible for CASF funding. If, however, funding for portions of the CBGs is actually being requested in the GBB application, Comcast will work with the CASF staff to provide census block data for partial CBGs.

Comcast pointed out that it had previously submitted NTIA Broadband Data stating its Maximum Advertised Upload Speed is Tier 8 (greater than 25 Mbps and less than 50 Mbps) and its Maximum Advertised Download Speed is Tier 10 (greater than 100 Mbps and less than 1 Gbps).

In essence, Comcast is claiming the implementation of NCRMMI as a "regional middle infrastructure" is not needed in the territories where Comcast is currently providing "last mile" services.

Background and Context of NCRMMI

The FY 2012 Work Plan of the Upstate California Connect Consortium (UCCC) and the Northeastern California Connect Consortium (NECCC) focused on:

- developing the Northern California Regional Middle-Mile Infrastructure (NCRMMI) plan; and,
- facilitating the formation of Golden Bear Broadband LLC (GBB) to implement, own, manage, and operate the NCRMMI.

NOTE: The responses to the Frontier and the AT&T challenges contain the narrative providing the background and context for the two Work Plan foci.

Based on the work of the NECCC and UCCC Consortia during FY 2012, the 16 Northern California counties still lack a comprehensive, integrated, open-access, regional middle-mile broadband infrastructure to meet their current needs let alone future.

The NCRMMI has been designed to provide a robust network infrastructure across these 16 counties that will meet current broadband needs as well as provide growth capacity for the next 20 to 30 years. This infrastructure will bring next-generation services that will promote: 1) economic growth of businesses and industry; 2) enhanced educational services; 3) access to increased library services and resources; 4) improved access to quality healthcare; 5) interoperability of public safety services; 6) online access to all levels of government services; and 7) provide each citizen the opportunity to avail themselves of the wide range of information resources and services they deem appropriate to improve their quality of life.

From the outset our goals and strategies for NCRMMI have been to:

1. Goals

- Develop a reliable, diverse, integrated and secure network architecture;
- Integrate and connect with each of the county-wide backbone systems;
- Provide anchor institutions (education, health delivery facilities, libraries and public safety) fiber access to NCRMMI directly or via the county-wide backbone systems;
- Provide last-mile access by businesses, government agencies and residents via county-wide backbone systems; and

 Provide access by Commercial Last-Mile Internet providers via direct connection or cell towers.

2. Strategies

- Utilize existing fiber wherever possible;
- Utilize other existing resources when possible (conduits, poles, colocation, etc.);
- Deploy as much fiber underground as is cost-effective;
- Deploy equipment for regeneration and access is designed to balance costs while providing future expanding access location needs;
- Pass through as many Incorporated Communities and Census Designated Places as feasible;
- Connect as many Anchor Institutions directly via fiber, as feasible;
- Connect Cell Towers to NCRMMI via fiber; and,
- Partner with "last mile" providers to serve as many households as possible.

To this last strategy, since NCRMMI is a regional middle-mile infrastructure with GBB as "wholesale provider" and Comcast is a "last mile" provider to households. The UCCC/NECCC believes Comcast should view GBB's NCRMMI as being complementary and a benefit to its "last mile" services and not a threat.

Attempts to Engage Comcast Communications

In FY 2012 Cathy Emerson, representing UCCC/NECCC, on separate occasions, spoke with Philip Arndt and Troy Walton, both Comcast Communications representatives. She shared with them our mission, goals and intent to develop plan for NCRMMI and to facilitate the formation of Golden Bear Broadband, LLC to pursue a grant to build and then own, manage and operate this regional middle-mile infrastructure to serve the 16 rural counties. When she asked if Comcast would be interested in participating in this endeavor, she was told that Comcast, as a private company, did not did not take federal or state grant funds, operates a closed system network, and did not participate in such collaborative endeavors. Consequently, we no longer pursued Comcast's involvement in our planning efforts.

However, we did keep in mind the fact that Comcast provides "last mile" services to households in communities in six (6) (Butte, Colusa, Glenn, Mendocino, Sonoma and Yolo) of the 16 counties that NCRMMI passes through.

Comcast's Infrastructure Deployment

We have been told that for competitive reasons Comcast does not share any information about its deployed infrastructure. Therefore, UCCC/NECCC does not have firsthand knowledge as to whether or not Comcast owns and manages any middle-mile fiber

routes. Even if it does, we understand that Comcast would not make any fiber on them available to any party to be used as part a collaborative project like NCRMMI.

Based on **Figure 1.0**, we know Comcast has infrastructure deployed in the communities it serves in the six counties. However, we do not know the type (coax and/or fiber) and the extent of deployment in each community.

As depicted on **Figure 1.0**, it appears each Comcast community is an island unto itself. We are not aware that Comcast owns and manages its long-haul middle-mile infrastructure interconnecting the counties and communities within the counties it services.

We have assumed Comcast acquires most, if not all, of its back-haul transport services from other providers. We do not know whether or not Comcast has acquired diverse and redundant back-haul capabilities to each of the communities it serves. However, the recent Suddenlink experience in Humboldt County of four major disruptions as a result of vandalism suggests the importance of redundancy. The deployment of NCRMMI can help address the redundancy issue.

Comcast's Advertised Services to Communities in Northern California

Table 1.0 provides pertinent demographic information about each of the 16 counties including: population, number of Incorporated Communities and Census Designated Places, number of households, median household income, percentage of persons below poverty, percentage of unemployment, and number of firms. The counties in which Comcast offers services are highlighted.

Based on the CPUC Round 6 Availability Report data **Table 2.0** provides a breakout by county of the number of households that are served, underserved and unserved. The counties in which Comcast offers services are highlighted.

The Fixed Wireless service buffer that extends up to eight (8) miles on either side of the NCRMMI regional middle-mile fiber path was included to provide "last mile" Internet Service Providers that might partner with GBB to provide greater broadband speed to underserved and unserved households.

Figure 1.0 shows the NCRMMI buffer area in the six counties. The blue line shows the CBGs that Comcast Communications claims are impacting their services. However, when the detailed CPUC data are analyzed the red highlighted area is the area where Comcast services are really accessible. **Figure 2.0 thru Figure 5.0** provide more detailed views of the specific counties.

Table 3.0 shows there are 283,897 households within the NCRMMI footprint. Comcast claims to pass by 257,822, or 90.8 percent, of these households. This means there are 26,075 potential households yet to be reached. **EXHIBIT #1** provides detail by CBG.

Table 3.0 Comcast Challenge CBGs by Households served at 6 Mbps and 1.5 Mbps up

| | Households in GBB | Households "Served" (100dn & 25up) by | Percent Served by | Number of | Number of CBGs Served 100% by | |
|-----------------------------|----------------------|---|-------------------------|-----------|---|---|
| COMCAST | Footprint | Comcast | Comcast | CBGs | Comcast | Percent |
| CBGs in Butte County | 75,974 | 69,915 | 92.0% | 180 | 94 | 52.2% |
| CBGs in Colusa | | | | | | |
| County | 6,764 | 4,214 | 62.3% | 19 | 2 | 10.5% |
| CBGs in Glenn County | 8,499 | 5,903 | 69.5% | 19 | 0 | 0.0% |
| CBGs in Mendocino | | 400000000000000000000000000000000000000 | Linder Spent on | | | 1.0000000000000000000000000000000000000 |
| County | 25,591 | 21,961 | 85.8% | 60 | 10 | 16.7% |
| CBGs in Sonoma | 125 715 | 120,604 | 05.60/ | 205 | 150 | 51.00/ |
| County | 135,715 | 129,694 | 95.6% | 305 | 158 | 51.8% |
| CBGs in Tehama County | 4,524 | 0 | 0.0% | 9 | 0 | 0.0% |
| CBGs in Yolo | 7,327 | 0 | 0.070 | , | 0 | 0.070 |
| County | 26,830 | 26,135 | 97.4% | 45 | 30 | 66.7% |
| Total | 283,897 | 257,822 | 90.8% | 637 | 294 | 46.2% |

It needs to be noted that there are no public data to indicate how many accessible households actually acquire and utilize Comcast's broadband services.

It also begs the question: 1) How many Comcast household customers actually have 100 mbps/25 mbps service?

In essence, as a regional middle-mile provider GBB would work with "last mile" providers in these six counties, including Comcast Communications, to ensure that every household has access to the quantity and quality of broadband capabilities they will need in the future.

Constituent Feedback and Concerns

We have had feedback and concerns expressed about the services of Comcast, and other providers, from constituents in all six counties. However, the most proactive and focused feedback and concerns have come from the Broadband Alliance of Mendocino County (BAMC) and the leadership of the Sonoma Connect Committee (SCC). These two groups, comprised of citizen volunteers, have joined forces to work together to articulate and promote the broadband needs of these two counties.

Over the past year they have worked closely with the UCCC/NECCC staff on the overall development of the NCRMMI and specifically on the Route 1 Corridor component. We have held several in-person meetings and in recent months have had a weekly conference call. Both BAMC and SCC have endorsed the NCRMMI as the key to providing both counties the comprehensive and redundant middle mile backbone that is critical to the future growth and development of both counties. In fact, there were of 100 letters of support for the GBB from various groups and entities in Mendocino County.

The design of NCRMMI in both counties reflects their priority needs. The top priority is to have NCRMMI serve the communities along the coast in both counties, the Route 1 Corridor. Another priority is to enhance the redundancy and capacity of connectivity between the Japan Cable Landing in Manchester and the transcontinental fiber paths. This increase in redundancy and capacity is vital to national security issues.

BAMC was founded in FY 2010 to ensure that the county's population has affordable access to broadband on their homes, businesses and public places to support economic viability, ensure health and safety and access to educational opportunities. It has worked diligently to bring broadband capabilities into the county.

However, BAMC believes the CPUC Availability Report data reflecting high percentages of the county as being served are highly misleading. One example. The Round 6 Availability Report declares that Comcast provides 100 Mbps/25 Mbps service to all of Brooktrails, a Census Designated Place. In fact, Comcast's service is only available to a portion of Brooktrails.

Sonoma Connect Committee is still in the formative stages. It has evolved from efforts to bring broadband to the western side of Sonoma County and the need and desire to work closely with Mendocino County and also with Golden Bear on NCRMMI. Like BAMC, SCC has become aware of difference between the advertised speeds of the providers that

end up in the CPUC Availability Reports. Another example. Residents on Joy Road have been told they have access to broadband speeds that exceed the CPUC standard of 6.0/1.5 Mbps. Here is a synopsis of a survey in process:

"Fully 34 respondents are shown as in an area covered by Comcast cable. Although this is true for 1 respondent out of the area and I need to check on 2 others on the fringe, 31 people show Comcast where there is no cable running near the properties and no plans to do so. In fact more of the addresses show Comcast than not according to your GIS database. As you know, cable requires a physical run to the residence and it just doesn't exist throughout the bulk of Joy Road Area."

At a recent weekly meeting of the BAMC chair, Jim Moorehead reported on the statement he made recently to the California Broadband Council, chaired by Michael Peavy, Chair of the CPUC. Jim made three points:

"1) Deployment is still an issue, as the incumbents have declined to expand service despite repeated requests, 2) The current CPUC maps overstate the served areas of broadband significantly, and 3) the Route One Corridor Project is a key component of the Golden Bear Broadband application, and it needs to be approved. The incumbents are not willing to do the work, nor work with the Alliance, and with the challenges to the Golden Bear application we are "Damned if we do and damned if we don't!"

In the same BAMC meeting Scott Adams of Comcast was present. He was asked by the BAMC why Comcast challenged the GBB application. One of the BAMC members stated:

"He didn't understand Comcast's position challenging the Golden Bear application, and he would think that Comcast would support a middle mile project (an important distinction) because it would provide Comcast with more vendors from which to buy capacity from. Comcast complains that AT&T is "strangling us on these routes" so an alternative to AT&T makes sense, and the Golden Bear is not competing with Comcast for TV, so why is Comcast opposing it.

Scott responded:

"He was told by the regulatory person that the Golden Bear was such a huge project and that significant portions of the fiber ring went through and over Comcast footprint areas, and that the project didn't fit the definition of what the CASF grants are about. Scott also stated that Comcast is committed to being involved in the process and he was at the initial upstate broadband consortium and that although their participation has not been as much as we may have wanted they are committed to being part of the conversation and solution."

BAMC's concern about the reliability and validity of the CPUC Availability Report data has caused them to partner with the Mendocino County Office of Education to pursue a \$100,000 Caltrans Environmental Justice grant to undertake a number of broadband related activities including: **Mapping actual existing broadband service levels and cost.** This is because BAMC does not have confidence in the CPUC data. To demonstrate its concern about the validity of the Comcast reported data over this past weekend BAMC reached out to citizens in the Albion area, where Comcast claims it provides comprehensive coverage, asking whether or not they had access to Comcast service. **EXHIBIT #2** provides the email responses suggesting that the CPUC data are overstated.

Summary Statement

The challenge by Comcast has missed the key point and the key message. The key point is that NCRMMI is the foundation to developing a full and complete broadband plan for Northern California. The key message is that for Comcast or any provider to be successful it must work with the leadership of the user community.

We believe the NCRMMI plan complements and benefits Comcast Communications as a "last mile" provider and we invite Comcast to work with UCCC/NECCC and GBB and each county group like BAMC and SCC to bring to the 1.634 million citizens, thousands of businesses and hundreds of anchor institutions in the 16 Northern California counties the broadband capabilities they will need to thrive for the long range future.

EXHIBIT #2

On Mar 31, 2013, at 11:37 AM, Charles Reinhart < chasr123@qmail.com> wrote:

Members,

If you are currently served by Comcast for your internet access or are within the narrow confines of "high speed" DSL service from MCN or AT&Tconsider yourself lucky. With your self interest met, you may mistakenly

believe you have no dog in the fight for rural broadband access but you would be wrong. Local efforts being made to bring broadband access to unserved areas of our communities will bring improvements to how all of us currently conduct our businesses, receive our news/information, and entertainment. These efforts are being stymied at this moment by three corporate internet providers, Comcast, Verizon and AT&T, who are or will challenge the proposals of the Broadband Alliance of Mendocino County and a multi agency effort to create a fiber optic "middle mile" backbone along State Route 1 in Mendocino and Sonoma counties. The Route 1 Corridor Project-http://www.mendocinobroadband.org/route-1-corridor-project/>
* (R1CP)* is a key component of a larger 16 county Golden Bear Broadband proposal to close the performance gap between rural and urban internet

Comcast is challenging this effort by using their obviously flawed data to contend that they currently provide wider coverage than the facts support. The tactic to shut down the "Route 1 Corridor Project" with demonstrably false data is just a local example of a flawed assumption: that the most important function of Comcast's business is not to provide a critical public service, but to maximize profits for it's shareholders.

Urgent call to action:

With your input it is possible to refute the claimed service area of Comcast by finding yourself on the attached maps and asserting if broadband service is *not* available to you. Please do so now by reply email.

You are right about south of Albion Ridge Rd along HW 1. No service west of highway. No service on G Rd, either side of Ridge Rd. Can't tell from map if that's what the thing shows.

Hi there.

Hive at 3451 Albion Ridge E Road and Comcast does NOT come to my home. They serve my neighbor to the south but will not serve me or the other many households on my road. I have tried to get service to my home but they quote prices of tens of thousands of dollars!

The map shows that I have access but it is not at all accurate.

Please help us to get internet service it is critical.

Thanks

Donna Feiner

Hi, I'm Gina O'Feral. My home and property are at 3501 E road north. 1200 ft from Albion ridge road, and 600 ft from where Comcast service ends on E road. Needless to say, I am not served, and very much would like to be! When I look on the map, unfortunately as much as I can tell comparing it to my house on google earth, I am not within the pink area where they are claiming they provide service, so I can't hold THAT against them. But if there is anything I COULD do to further our cause, I'd be interested!

Dear Jim & Tom,

This is to inform you that we not only don't have Comcast coverage at 32101 Albion Ridge Road, but all the times I have called Comcast and asked for coverage they have said an emphatic "NO".

Thanks for your assistance.

Sincerely,

Roberta & David Belson

Subject: Comcast Service Area Inacuracy Date: March 31, 2013 3:32:45 PM PDT

To: jlm@mcn.org, twest@cenic.org

CPUC,

I live at 2490 Nonella Lane, which is West of HWY 1 and South of Albion Ridge Road. I live in a group of about 20 homes.

We do not have Comcast Service. The service map which I have reviewed shows a service area in which I live along the coast and the map is incorrect.

I have called Comcast in the past to provide service and they ignored my request. Our only internet provider is via satellite which is not at broadband speed.

CPUC,

We live at 2404 Nonella Lane, Albion, Ca. The location is West of HWY 1 and South of Albion Ridge Road. There are about 20 homes in the immediate area, including Pacific Reefs Subdivision.

We could not not sign up with Comcast due to lack of coverage at our home. I am unaware of any Comcast Service to this area west of SR 1. The Comcast service map which I have reviewed indicates available coverage to this area, but service has been denied.

We currently have satellite internet coverage at much less than broadband speed.

I live at 31602 Albion Ridge Road, Albion CA 95410. I have no access to broadband internet due to being outside the ATT/Comcast coverage area. My only options for internet connectivity are dial-up, or US Cellular mobile hotspot or satellite. Although the latter are faster than dialup they are much more expensive than cable, with limited data caps and lags that prevent streaming, interactive video, and various business applications.

We are tired of being treated like second class citizens, relegated to the horse and buggy era of the internet. The majority of residents of Albion Ridge are outside the Comcast coverage area. We have waited long enough and need cable internet NOW!

Hello:

We live at 34225 Pacific Reefs Road, which is West of HWY 1 and South of Albion Ridge Road. I live in a group of about 17 homes.

We do not have Comcast Service. The service map which I have reviewed shows a service area in which I live along the coast and the map is incorrect.

I have called Comcast in the past to provide service and they ignored my request. Our only internet provider is via satellite which is not at broadband speed. This situation and the map need to be corrected.

Thanks you,

Brenda Hall John Hall

I understand that you are the person that might be influencing the mapping of Comcast broadband service. I have had nothing but dial-up available to me at Pacific reefs for 22 years. I am most interested in doing whatever I can to see that we have broadband service. Please advise me how I can help. Thank you. Judy Katz

Hi Jim- please feel free to send this in to CPUC, I do not see any address to send it to so I trust you folks will get it to its proper destination I will also send this to Jim M and Shirley

My name is Chris Skyhawk. I live with my family at 28410 Albion Ridge Rd. We are near the 2.25 mile marker on Albion Ridge Rd. and Comcast does not come up the ridge to us or anyone in our neighborhood.

Thank you

Sincerely, Chris Skyhawk PO Box 127 Albion CA 95410 707-937-4295

Jim,

As you remember, we assembled a map showing served and unserved residences in this same area. The shaded Comcast-served area for Albion would be better represented by a single marker line along the road, since in only a few cases do they extend service branches any distance from the buried trunk line. I know of one case where a former State Energy Commissioner couldn't get them to extend 100 yds. down his driveway despite a junction box located where it intersects @ 32281 Albion Ridge Rd.

The extent of their service shown up Albion Ridge is more or less correct. It's the breadth that is fictional.

I was puzzled by the apparent dead zone depicted along Comptche Ukiah Rd. They claim service away from the road, but not adjacent to it. That doesn't seem likely. I know of one 7Mb customer in the shaded zone shown touching the road a few miles out. It happens to be where the cable changes from overhead to burial. I think the broad shading derives from only few customers.

This is the best I can muster at this late hour.

Thanks for your perseverance,

Steve

I live at 2000 N. Highway 1 in Albion, CA which is West of HWY 1 and South of Albion Ridge Road.We have long awaited broadband service from any available provider and have made numerous requests for the infrastructure to be extended to our area south of where it is currently.

We do not have Comcast Service. The service map shows a service area in along the coast but the map is incorrect.

I have called Comcast in the past to provide service and they ignored $\ensuremath{\mathsf{my}}$ request.

NCRMMI is being collaboratively developed by the <u>Upstate California Connect Consortium</u>, the <u>Northeast California Connect Consortium</u>, and the Broadband Alliance of Mendocino County with generous funding from the California Advanced Services Fund (CASF) <u>Broadband Consortia Grant program</u>.

The Route 1 Corridor Project (R1CP) is a factorable sub-project of the NCRMMI which would provide a fiber middle-mile backbone primarily along State Route 1 in both Mendocino and Sonoma counties.

Good Morning Tom,

I found two more emails that should be of interest to you. I realize you're up against a deadline, but here they are.

Tina Nerat, the RCC consultant arranged a meeting for our old MCBA coastal group with Paul Gibson, Comcast Cable Area VP, North Bay Area, Western Division. The meeting was on Feb 29, 2008 at the Mendocino Middle School Library. We brought the large parcel maps that our team had marked up showing extent of Comcast service on each road and all the unserved parcels beyond those points. When we rolled out the maps on a big table, Gibson's reaction was of seemingly great interest, asking a number of questions, and explaining potential technology challenges. At end of meeting, he asked for copies of the maps be sent to him in San Rafael. We all departed the meeting with sense of a breakthrough. Nope!!! We sent Paul copies of the maps and never heard from him again. Tina, Shirley Freriks (Pres. of MCBA) and I all tried phoning and emailing him. Never a response.

Second email -

On a call last summer with Tina Nerat, we agreed that Tina should try and approach Rachelle Chong who was then still at Comcast. Tina and Rachelle had met several times at conferences, etc. and we thought that she might be able to get some face time with Rachelle. The request was to determine Comcast interest in leasing/buying dark fiber on the R1CP to solve their middle mile problem on the coast, asking Rachelle to make the introductions. I don't recall any meeting ever taking place and now Rachelle is a blogger.

The map showing my neighborhood attached to this second email, which was also sent to Paul Gibson, appears in the Appendix of the first RCC Broadband report (Jan '09) page 185. Tina was one of the report's authors. These 19 homes are now 22 homes - all Unserved, and only about 1/4 mile from end of Comcast fiber. The Comcast-provided map shows that they are served, and the FCC data base says that they can receive 100Mbps+ service. Pure fiction.

From: "Shirley Freriks" <sfreriks@mcn.org> Subject: FW: 29th meeting with ComCast Date: February 20, 2008 10:33:00 AM PST

To: "Ted" < ted@ted.net>, "Jim Moorehead" < tilm@mcn.org>, "Rod Lorimer" < trodric@mcn.org>

Hi - Tina has just confirmed a meeting with ComCast for 10 am Friday morning the 29th of February. She said only a few of us are appropriate to talk with them rather than the whole team. The four of us each hold an important piece at this point I think. Can you attend? Location to be announced...

Her agenda suggestion is:

A first quick thought at agenda items:

- Introductions (all) 5 min
- RCC and how it fits in with Mendo coast (Tina Nerat) 5 min
- Comcast overview history with Adelphia and plans (Paul Gibson) 5 min
- Overview of Coast Connect group activities (Shirley Freriks) 10 min
- Opportunities for expansion beyond current Comcast footprint (all) 30 min
- Other? I ran dry here.....
- Actions (all) 5 min

I added the important question of how do we get down the side roads where there are a significant number of people? Someone suggested the other day at our meeting that we see if they can give multiple nodes at the end of each road for hookups. We can probe them anyway. This is where Ted's infrastructure knowledge would be really important to have

I hope you can make it. Thanks for letting me know your thoughts.

Peace be with you. Shirley Freriks

-- Original Message From: Tina Nerat [mailto:tina@neratech.net] Sent: Tuesday, February 19, 2008 5:20 PM To: 'Shirley Freriks' Subject: 29th

Are you available at 10am on the 29th? I think I have it set up with Comcast. Catherine Stone will get us a room in one of the school libraries so we're on neutral turf and not in the Comcast office and not in the more urban area of Ft Bragg. I think we need to keep this group SMALL (please) for the initial meeting. You, Rod, Jim, and just a few others of the folks you've been working with who are also near Comcast turf. Let's collaborate on agenda and who will be there. Tina

I know you're off for the next week and this does not need your immediate attention, but wanted to share it with you and Greg. Amazing how the time passes - I wrote the attached letter to you nearly five years ago!

My neighborhood is an example of where Comcast could extend it's service a short distance and solve this particular problem. When we met with Paul Gibson in the spring of 2008, you'll recall that he seemed very interested in our MCBA maps and asked for copies. Alas we never got anywhere with him or Comcast at the time. My thinking on why he was interested is that, that unlike AT&T who has a wireline to practically every residence, he doesn't really know where the demand is. The MCBA maps showed him where that demand is.

So going forward, when you talk to Rachelle, I'd suggest emphasizing the value proposition BAMC can offer to Comcast on identifying the demand in Mendocino county. We have the mapping and can get the 'boots on the ground' to show where and how much demand. If Comcast takes some of the Highway One fiber, BAMC stands ready to assist them in mapping out their network by doing on a larger scale the work I did for my neighborhood.

Jim
